

Background Information

- ❖ National excellence awards are a validation for exceeding standards in patient safety, quality care, healthy work environments and a skilled nursing workforce.
- ❖ The AACN Beacon Award™ for Excellence provides unit-based recognition and achieving this validation authenticates an individual unit's efforts to improve care for patients and families.
- ❖ Only twelve recovery units in the nation have received the Beacon Award for Excellence.

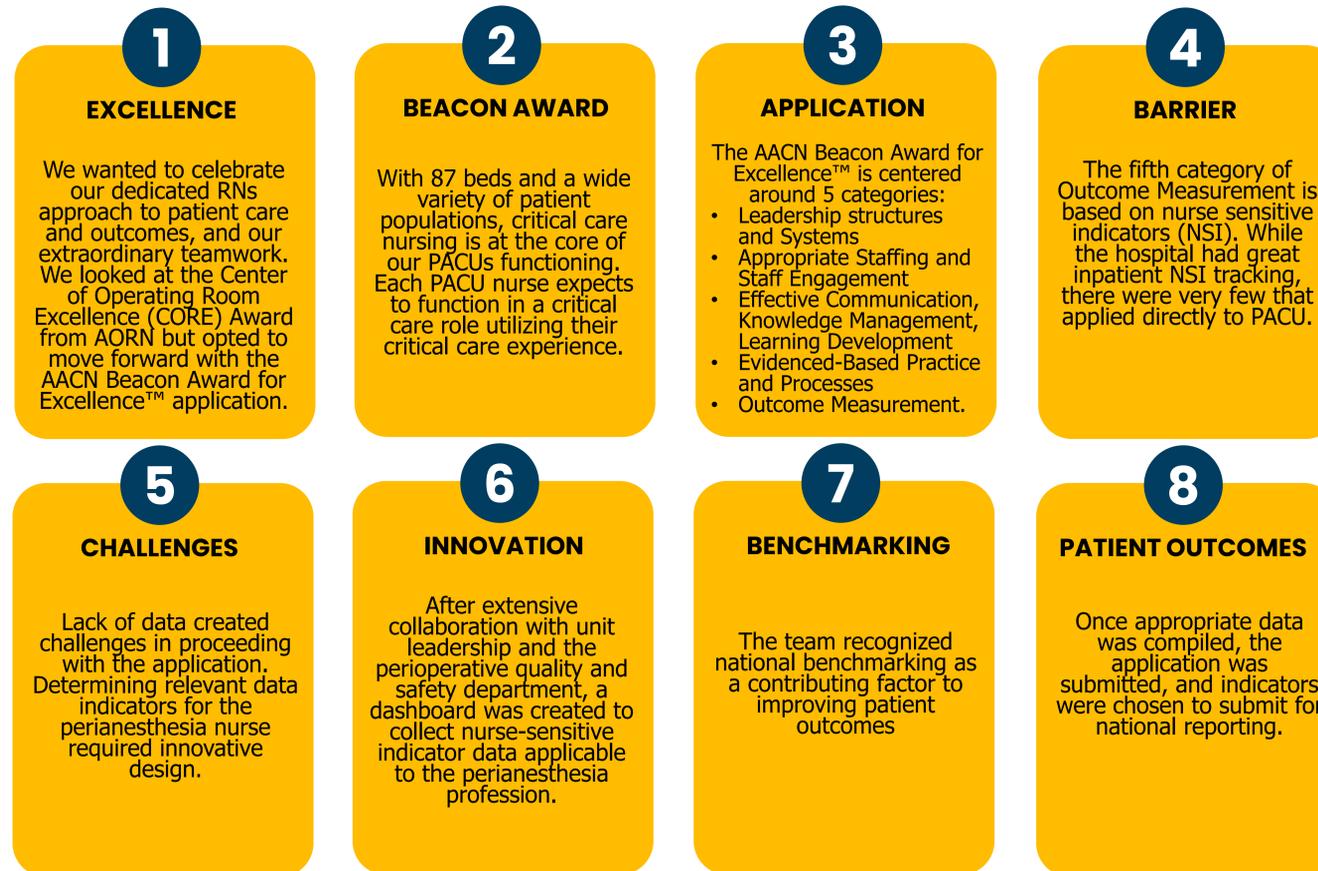

Project Objective

Demonstrate UC Davis PACU RNs contribution to ensuring patient safety, quality evidence-based care, the creation of healthy work environment, as well as the development and maintenance of competencies.

Process of Implementation

Statement of Successful Practice

- ❖ The Post-Anesthesia Care Unit (PACU) and Children's Surgery Center PACUs were awarded a Silver Beacon Award for Excellence by the American Association of Critical Nurses in December of 2023.
- ❖ The Beacon Award for Excellence commends hospital units that engage in evidence-based practices to improve patient and family outcomes.
- ❖ The recognition illustrates excellence in professional practice, recruitment, retention, education, training and mentoring; research and evidence-based practice; patient outcomes; leadership, and organizational ethics; as well as the creation of a healthy work environment.

Implications for Advancing the Practice of Perianesthesia Nursing

- ❖ The PACU's effort to obtain an excellence award boosts morale, fosters better patient outcomes and healthier work environments.
- ❖ Understanding the barriers and challenges in applying perioperative nurse indicators to a critical care nurse excellence award can spur other PACUs to pursue awards for their units.
- ❖ Submitting outcome data for national benchmarking recognizes unit achievements and opportunities for growth, advancing perianesthesia nursing practice and acknowledging the profession's importance to patient outcomes.
