SOUTHERN ILLINOIS UNIVERSITY EDWARDSVILLE CHILDREN'S HOSPITAL, BJC HEALTHCARE, ST. LOUIS MO.

HASIMA HAJDINI BSH. RN. CPN

1

#### LOCATING AND FOLLOWING HEALTH CARE FACILITY **POLICIES AND PROCEDURES**

- · Database for storing policies and procedures
- Accessing the search engine
- Deciding what text to enter within the search field
- Deciding what policy or procedure is the correct one
- Determining if the policy or procedure is current

## **SELECTING THE POLICIES AND PROCEDURES** AND HYPERLINK LOCATION

The research team conducting meetings with the following...

- Chief Nurse Executive
- Legal Personnel

3

- · Peri-anesthesia Nurses
- Clinical Information Systems Department

(Include these meetings at your institution)

#### **AGENDA**

- 1. Problems associated with locating health care facility policies and procedures
- 2. Concept of nursing usability as it relates to the electronic medical record
- 3. Performance testing study that measured nursing EHR usability prior to and following policy and procedure hyperlink insertion into an EHR
- 4. Questions

2

#### PURPOSE OF THE STUDY

The purpose of this study was to evaluate the effects of implementing clinical decision support (embedded policy or procedure hyperlinks) within intuitive areas of an EHR used by nurses. The researchers sought to determine the impact embedded hyperlinks had on nursing EHR usability and workflow including the ability to locate policies and procedures.

Funded by Two Grants from SIUE & BJC Healthcare

4

6

## **RESEARCH STUDY**

- IRB
- Setting
- · Performance Testing (Morae©)

#### **USABILITY**

The extent to which a product can be used by specified users to achieve specified goals with <u>effectiveness</u>, <u>efficiency</u> and <u>satisfaction</u> in a specified context of use.

International standards for HCI and usability, 2001

# **Definitions**

<u>Effectiveness</u>: The accuracy and completeness with which a user can achieve task goals.

<u>Efficiency:</u> The speed with which a user can successfully accomplish the task at hand.

<u>Satisfaction</u>: A person's subjective response to their interaction with a system.

Belden et. al., 2009

7

## **METHODS**

#### **PARTICIPANTS**

- Ten registered nurses (average age 38 years; range 30-58)
- Six from PACU, three from oncology, 1 from pediatric ICU
- Worked with the EHR for at least 6 months and had conducted searches for policies and procedures

#### **DESIGN**

• Interrupted time series design

#### INTERVENTION

 Two hyperlinks to each policy and procedure were embedded within intuitive areas of the EHR 8

#### PARTICIPANT TESTING

#### Pre-intervention testing / Post-intervention testing

Nurses were asked to complete an exam that tested their knowledge of the two policies and procedures

- 1. Pressure Injury and Wound Assessment and Intervention
- Accessing, De-Accessing, Implanted Ports and to Guide the Clinician on Appropriate Care and Maintenance Practices

9

#### Pre-intervention testing / Post-intervention testing

Following the exam nurses were asked to log into the computer and locate the two policies and procedures

PARTICIPANT TESTING

Usability was determined by efficiency, effectiveness, and satisfaction

Following hyperlink insertion, the researchers waited 3 months before conducting post-intervention testing in the same manner.

10

## **PARTICIPANT TESTING – METRICS**

#### Efficiency

• Time, Keystrokes, Mouse Clicks, Mouse Movement

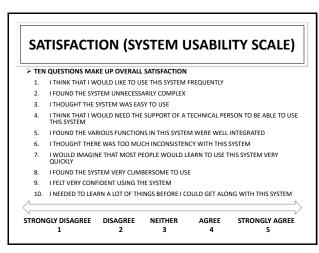

#### **Effectiveness**

Ability to locate the policies and procedures within 10 minutes

#### Satisfaction

12

• System Usability Scale (SUS) - John Bock 1996

## **RESULTS - EFFICIENCY**

1. Pressure Injury and Wound Assessment and Intervention

	Pre-Intervention		Post Intervention		
		Std.		Std.	Sig.
	Mean	Deviation	Mean	Deviation	(p-value)
Time	279	122	97	34.9	0.002
Keystrokes	74	44	27	16.0	0.003
<b>Mouse Clicks</b>	37	22	17	7.0	0.028
Mouse Mvt.					
(Pixels)	44910	24904	17559	9484	0.006

Significance determination < .05

14

16

13

## **RESULTS - EFFICIENCY**

2. Accessing, De-Accessing, Implanted Ports and to Guide the Clinician on Appropriate Care and Maintenance Practices

	Pre-Intervention		Post Intervention		
		Std.		Std.	Sig.
	Mean	Deviation	Mean	Deviation	(p-value)
Time	107	81	34	16.0	0.016
Keystrokes	28	29	5	6.7	0.023
<b>Mouse Clicks</b>	16	15	8	4.9	0.185
Mouse Mvt.					
(Pixels)	19312	16988	9233	6080	0.121

 $Significance\ determination < .05$ 

**RESULTS - EFFECTIVENESS** 

Pre-intervention (locating both policies & procedures) 7 out of 10  $\,^{\sim}$  (70% success)

Post-intervention (locating both policies & procedures) 10 out of 10  $\sim$  (100% success)

15

## **RESULTS SATISFACTION**

The SUS score significantly increased (P<.05)

**Pre-intervention** 

24.5

Post-intervention

86.3

**SCORING THE SUS** 

SUS Score	Percentile	Grade	
78.9 - 100	85 – 100	A	
72.6 - 78.8	65 – 84	В	
62.7 - 64.9	35 – 64	С	
51.7 - 62.6	15 - 34	D	
0-51.6	0 – 14	F	

GRADING SCALE (ON A CURVE) PUBLISHED BY JEFF SAURO

#### **KNOWLEDGE**

#### **Exam Results**

No significant difference following the intervention.

Zero nurses could correctly identify the names of either policy or procedure.

Only six (60%) of subjects correctly identified that patients should turn their heads during port-a-cath access.

Additionally, only three (30%) of subjects correctly identified a stage 2 wound.

19

### **POST TEST QUESTION 1**

The amount of time it takes for a nurse to use a clinical documentation system to locate a policy would be categorized under which component of usability?

- a. Satisfaction
- b. Efficiency
- c. Effectiveness
- d. Learnability

21 22

## **POST TEST QUESTION 3**

Why is it important for a nurse to be able to locate policies and procedures?

- a. Because nurses may not be aware of recent policy or procedure updates.
- b. To reduce the risk of being found negligent in cases that go to court
- c. To provide care that meets the standards of care.
- d. All the above

#### **CONCLUSIONS**

The study results presented support that inserting policy and procedure hyperlinks into intuitive areas of an EHR can improve nursing usability and workflow by improving effectiveness, efficiency, and satisfaction.

Many nurses were not able to recall the correct steps associated with patient care as specified in the policies and procedures. This supports the notion that nurses need to access policies and procedures prior to performing associated tasks to meet the standard of care

Which of the following would be the most important people to consult prior to embedding a nursing policy hyperlink into an electronic health record?

**POST TEST QUESTION 2** 

- a. Nursing, Administration, Clinical Information Systems
- b. Billing, Data Warehousing, Pharmacy
- c. Administration, Billing, Legal
- d. Data Warehousing, Clinical Information Systems, Billing

#### **BEST PRACTICES**

- 1. What are some policies and procedures you believe would be beneficial to nurses if embedded within the EHR?
- 2. Who should be consulted to determine optimal locations to embed the hyperlinks?
- 3. Why is it important for nurses to locate and follow adopted policies and procedures?
- 4. How would health care facilities go about ensuring policies and procedures are current and congruent within the organization?
